Gefen EXT-VGA-AUDIO-141 Vga/Audio Extender(Receiver/Sender) Kit Up To 330ft

Extends VGA and analog audio up to 330 feet (100 meters) over one CAT-5 cable.

How it works The VGA Audio Extender utilizes a sender and receiver methodology to connect the extended workstation to the computer. Simply connect the sender unit to your computer using the cables provided. Then connect the receiver unit to the display and speakers. CAT5e cables, sold separately, then connect the sender unit to the receiver unit. Both the sender and the receiver units must be connected to a power supply. When fully powered and operational, the units efficiently extend video, audio and control signals.

Features:

- Extends any VGA or high definition component display and analog L+R audio device up to 330 feet (100 meters)
- Trim pod and dip switches for fine video equalization
- Perfect for digital signage applications
- One CAT-5 cable for extension
- Supports resolutions up to 1080p, 2K, and 1920 x 1200
- Bi-directional audio transmission for speaker and mic
