

BG-3GS14
1X4 3G-SDI Splitter

The BG-3GS14 is a 1x4 3G-SDI splitter that splits one SDI input to four SDI outputs simultaneously. With signal relocking feature it also extends video signal for a long distance. This reliable and powerful tool providing consistent connections in a variety of different scenarios, like adding multiple outputs for monitoring video feed on a separate displays, splitting the signal and cascading multiple displays for large video distribution system or just to extend SDI signal.

The BG-3GS14 supports a maximum resolution of 1080p@60Hz with 3G-SDI signal. The device also supports a wide range of data rates from 270 Mbps at the low end to a maximum bandwidth of 2.97 Gbps. There is also support for multiple deep color settings such as 8 bit, 10 bit, and 12 bit.
