

FOX & HOUND

HDMI

HIGH DEFINITION MULTIMEDIA INTERFACE

THE VIDEO AND AUDIO DISTRIBUTION TESTING KIT BUILT FOR CUSTOM AND COMMERCIAL INTEGRATORS. GENERATE 18 GBPS 4K 60 (4:4:4) TEST PATTERNS AND SEND THEM THROUGH OUT YOUR SYSTEM, THEN USE THE ANALYZER ON THE SINK END TO READ ANY CHANGES IN YOUR SIGNAL.

This 18 Gbps Generator and Analyzer Testing Kit was built as the ideal testing unit for all custom and commercial integrators. The Fox & Hound Test Kit comes with one 18 Gbps Generator and one 18 Gbps Analyzer, these tools allow you to confirm the correct bandwidth, HDCP, resolution, timing, HDR meta-data and many more options that could give your system hiccups if not treated correctly. "How does this kit" work you ask? Well you place the generator in place of your source and the analyzer in place of your sink and you can read the data that is being sent through out a system. You don't have to get on the phone with support hoping they can replace a product, run whatever type of signal you would like through the unit and confirm that the signal is being passed through the product with no changes. Never question if a cable or extender is bad again, you can have your answer in less than a minute.
