

Flexible Installation

The KPE requires no programming, instead it adopts the zone it controls from the amplifier controller port it is connected to.

Source control can be achieved using the original manufacturers remote and the IR receiver/target on the front of the keypad.

As the KPE is powered directly by the controller ports it needs no additional power supply.

Slim and discrete styling with tactile buttons and screwless decora cover plates, it is a functional system controller available in black or white.

Technical Specifications

-) Plug and Play Versatility
-) Operating voltage - 12VDC
