

ICRealtime IVB-401T Video/Audio/PTZ Signal 4 CH ACTIVE Extender (Transmitter)

Video Baluns provide an economical alternative to coaxial cable for video/audio/signal transmission. Together with ICR's active receiver (IVB401R), IVB401T transmits full-motion color CCTV video at distances up to 5,400 feet (1,800m) over unshielded twisted pair cabling with little to no degradation of signal. It saves installation time/cost by sharing existing UTP network cable for video applications.

Features

- Long distance video signal transfer over a twisted pair
- Transmit video signal up to 5,400 feet (1,800m)
- High quality Video Balun for color and black/white video or audio
