

DVDO iScan Micro 4K HDMI Scaler and Video Enhancement Cable

iScan Micro is designed to make your video better. The 4K Ultra HD TVs are now readily available and deliver pristine video resolution with 8 million pixels. Most of today's viewing content is not native 4K. This content is available on DVD and Blu-ray discs or streamed over the Internet in a highly compressed format. Artifacts generated from compression or the use of low quality scalers can result in reduced picture quality. iScan Micro is specifically designed to automatically upscale both SD and HD sources up to 4K resolution or the best resolution the display can handle while enhancing original source content. With many of the same features as the larger iScan Mini, Micro brings professional quality scaling and video enhancement in a tiny package which can be hidden behind any display.
