

Ashly RD-8C Fader Remote/8-Ch w Master/tabletop

This listing is for RD-8C Remote only. Use description below as a general reference.

The RD-8C and RW-8C are eight channel programmable remote fader controllers for Ashly networkable products that have a remote Data connection. Products include the ne24.24M, ne8800/4800/4400 processors, Pema amplifiers, *NE multichannel amplifiers, and *nXe and nXp amplifiers. The RD-8C is a desktop model using an XLR data connector. The RW-8C is a wall-mount version, designed for a standard 4-gang US electrical box and uses a Euroblock connector. A master gain fader controls all eight channels, and a switch with LED enables each fader. Use Ashly Proteane software to configure faders for DSP control.
