

Phase Technology CI130 Dual 6.5in 3-Way In-Wall Speaker/45Hz-22kHz

3-Way In-Wall Speaker with Extruded Aluminum Positive Clamping System

Versatile, high-performance in-wall speaker that can be used to compliment an upper-end home system. The CI130 uses the same woofers and midrange/tweeter assemblies as the Premier Collection series. The tweeter and midrange assembly absorb the horizontal sound waves through Unicell Acoustic treatment to minimize interaction with the mounting wall – resulting in amazingly precise imaging and clarity. Additionally, the CI130 employs Phase Tech's patented Positive Clamping System, ensuring accurate control of low end performance and a clear reproduction of the sound into the listening space. 3.75" mounting depth allows this speaker to be mounted in shared walls.
