

Phase Technology CI150 5.25in 2-Way In-Wall LCR Speaker w PCM System

The CI150 is unique in that it combines the front left and right channels with the center channel in two cabinets instead of the normal three. Dual drivers and tweeters offer superb sound quality for all three front channels from just two speakers, producing the same sweeping soundstage as the finest multi-channel movie theater all while providing discreet three-channel performance out of only two speakers. The upper portions of both speakers handle the dedicated left and right content, but the lower portions of each CI150 act as discreet mono center channels which are then fed the same center mix from your source, collapsing the sound into a center image. This creates the illusion that there is a center channel speaker right in the middle of your left and right speakers.

This unique in-wall features patented triple 5.25" tri-laminate made with Kevlar®/RPF™/Glass Fiber flat-piston woofers (patent 4566178) and dual 1" user-adjustable, variable-axis soft dome tweeters.

Proprietary mounting systems are included for the on-wall and flush-mount in-wall systems. The CI150 eliminates the need for a separate center channel and its paintable finish won't interfere with interior design.

The CI150 pairs with Premier Collection's PC1.5 and PC33.5.

Features:

- Three 5.25 inch RPF flat-piston fiberglass & made with Kevlar® composite wooferw with butyl rubber surrounds and two 1 inch tweeters
- Eliminates the need for a separate center channel
- Limited Lifetime Warranty
- Auto-Reset Overload Protection
- Absolute Phase Crossover Network
- Magnetic Micro-Flange Grille
- Positive Clamping System for a tight, nonresonant seal
- Unicell Acoustic Treatment for tweeter diffraction prevention
