

Soundtube ST-MacFI-MP MP3 digital audio record/play system

The MacFi-MP is a MP3 digital audio record / play system. The MacFi-mp incorporates a MPEG processor for record and playback quality of up to 15kHz bandwidth. With its increased capacity, the MacFi-mp is able to store up to 99 individual messages. Mackenzie's™ Dynamic Message Length (DML) technology allows each of the 99 messages to be of different duration. DML also provides for replacement messages to be a different length than the original, maximizing memory efficiency and compatibility with future applications.

The MacFi-mp utilizes solid state, non-volatile, FLASH memory which stores messages until they are re-written. Message data is protected from power outages and no battery is required. The system contains no moving parts and offers unsurpassed reliability.
