

Installation Manual

4mm (banana) plug

This 4mm (banana) plug offers a Rear Entry of the speaker wire. The Heavy-Duty 24k Gold plating will resist corrosion and will provide the best possible connection.

Note: The rear entry has 2 areas which can accommodate a 3~11 and 12~18 a.w.g. wire (lower # means thicker wire)

Installation:

1. Unscrew the outer sleeve of the banana plug and unscrew 2 bolts. 12~18 gauge - Strip the speaker wire to approximately 5mm (3/16in). 3~11 gauge - Strip the speaker wire to approximately 19mm (3/4in)
2. For gauges 12 through 18 - Twist the stripped part of the speaker wire a few times to keep all of the strands together, insert it through the jacket and then through the big into the smaller opening in the plug. Once inserted, tie up the screws enough for the sleeve to clear them and for the wire to hold in place.
3. For gauges 3 through 11 - Twist the stripped part of the speaker wire a few times to keep all of the strands together, insert it through the jacket and then through the big opening in the plug. Once inserted, tie up the screw enough for the sleeve to clear them and for the wire to hold in place.
4. Screw in the outer sleeve. The plug is ready to use.
