INTRODUCTION

Atlona Technologies AT-3GSDI500 3G/HD/SD-SDI Pattern Generator is an advanced SDI pattern generator with multi-format (3G/HD/SD) and multi-pattern support. Besides still and moving video test patterns, other features such as audio (SMPTE-291M) are also provided. AT-3GSDI500 can support up to 8 channel AES compliant audio with 48KHz sample rate. Another attractive feature of AT-3GSDI500 comes from bypassing HDMI input and allows users with more testing patterns for connected display or treats AT-3GSDI500 as an advanced HDMI to SDI converter with 3G capability. With portable size, AT-3GSDI500 is equipped four buttons and LCM screen to ease the control. This device provides a cost effective way to calibrate and test SDI enable video devices and displays.

Input Panel

- HDMI INPUT:** Plug in a HDMI cable to be linked to a HDMI source
- +5V DC:** Connect to a 5V DC power supply unit

Output Panel

1. **SDI OUTPUT A:** Connect to a SDI device for SDI, HD-SDI, or 3G-SDI signal output either from the chosen pattern or the converted HDMI source signal
2. **Lock LED:** showing if the audio/video signal existed or not
3. **SDI OUTPUT B:** Connect to a SDI device for SDI, HD-SDI, 3G-SDI signal output either from the chosen pattern or the converted HDMI source signal

Bottom Panel

A 4-pin DIP switch is used for user interface, and users can access this switch from the bottom of the unit.

Pin No.	1	2	3	4
ON (↑)	Used for SMPTE352M	3G level B	10	Update EDID
OFF (↓)		3G level A	Not in use	Default EDID

1. *Factory default for 4-pin DIP switch: OFF-OFF-OFF-OFF [↓-↓-↓-↓]*
2. *In order to keep the compatibility of HDMI to most monitors, AT-3GSDI500 features EDID learning ability. The operation is shown in the EDID LEARNING section.*

EDID LEARNING

1. Power off AT-3GSDI500 and set the pin 4 of DIP switch of AT-3GSDI500 to OFF [▼].
2. Connect the HDTV to the HDMI port on the AT-3GSDI500, and then power on AT-3GSDI500.
3. The Lock LED on the AT-3GSDI500 will dim and light again, which indicates the EDID learning process is done.
4. Connect AT-3GSDI500 to the HDMI source through a HDMI cable and enjoy the experience.

NOTICE

1. In HDMI bypass mode, users must be aware of that the jitters coming from HDMI sources, such as DVD players, may be much higher than typical requirement according to SMPTE request on HD-SDI signals. This will result in SDI output with high jitters or even no SDI outputs!
2. Due to the high frequency bandwidth and low jitter requirement of 3G-SDI signals, for single SDI output case, it is strongly recommended to use one 75 ohm terminator for the unused SDI output to keep the best performance.
