

Adder ALIP-GOLD AdderLink IP Gold KVM over IP with DVI and USB

The AdderLink IP Gold adds support for digital video, audio over IP, USB keyboard and mouse and virtual media support to the AdderLink IP family. Providing remote keyboard, video, mouse, and audio access via IP to your current KVM switch, the AdderLink IP Gold allows management of your computers from anywhere in the world securely and remotely via the Internet, dial-up link or corporate network.

The AdderLink IP Gold doesn't need any software to be loaded on your servers and is easy to set up and use. The AdderLink IP Gold uses Real VNC client software that, unlike HTTPS web browsers, is designed for secure, high performance KVM over IP applications. The AdderLink IP Gold integrates with your existing KVM infrastructure to provide a cost effective global management tool.

FEATURES:

- Auto sensing digital or analogue video interface
The use of DVI-I interfaces overcomes the limitations of analog video and allows for greatly improved video update and pixel-perfect performance. However, where no digital feed is available the AdderLink IP Gold will auto sense and support an analogue input.
- Audio-via-IP
The AdderLink IP Gold enables CD quality audio signals to be fed from the target computer to the remote user via IP. Essential for administration tools and applications where sound or audible alarms are used.
- Dual power connections
To ensure maximum uptime and connection stability the AdderLink IP Gold has dual power supply facilities allowing for both mains and UPS supply.
- USB keyboard and mouse connections
Many PCs and multi platform environments demand that USB is used for keyboard and mouse connections. The AdderLink IP Gold provides this for both the local console and computer/KVM connection. PS/2 keyboard and mouse connections are also supported.
- Virtual media support (via USB)
To transfer files from the remote user to the controlled computer, the AdderLink IP Gold has been engineered to act as a conduit through which data can be passed. Files can be transferred via IP on to the AdderLink IP Gold and on to the target computer by means of a virtual media port (USB).
- High performance video
Hardware improvements and a significant increase in processor speed means that the video update performance is greatly increased and Adder's advanced anti-aliasing strategy further reduces screen degradation when colours on the screen change very slowly.
