

# Gefen ADA-DP-2-MDPF DisplayPort to Mini-DisplayPort Adapter

## Connect DisplayPort devices and Extenders to Mini-DisplayPort displays

Mini-DisplayPort is a miniaturized version of DisplayPort and is widely used on all new Macintosh computers and Apple Cinema Displays. The simplified construction and plug-and-play design of the DisplayPort interface provides ease of use and lower costs since one cable can be used to carry both analog and digital audio/video. The Gefen DisplayPort to Mini-DisplayPort Adapter is designed to connect a workstation using DisplayPort to an Apple Cinema Display.

This product also lets you extend Apple Cinema Displays using the Gefen DisplayPort Super Booster Cables (EXT-DPSB).

## How It Works

Connect the DisplayPort connector to the computer source. Connect the Mini-DisplayPort cable from the display to the Mini DisplayPort connector on the adapter cable.

## Features:

- Supports resolutions up to 2560 x 1600
- Compact, lightweight adapter cable fits in any laptop bag
- No external power required

## Specifications:

- DisplayPort Connector: 20-pin, male
- Mini DisplayPort Connector: 20-pin, female
- Operating Temperature: 0 ~ 40 °C
- Cable length: 10"
- Shipping Weight: 1 lb.

## Package Includes:

- (1) Gefen DisplayPort to Mini-DisplayPort Adapter
