

Gefen EXT-DVI-144N 1x4 DVI Distribution Amplifier

One DVI input, Four DVI outputs

DVI (Digital Visual Interface) is a common connector used throughout the industry to connect digital video displays to video sources such as computers. Gefen's 1x4 DVI Distribution is a distribution hub that sends the same DVI graphics source to up to four DVI digital displays (flat panels or projectors). It is a reliable solution that accommodates four digital video displays at the same time, creating a multi-viewing environment that maintains the highest resolution video at all times.

How it worksThe 1x4 DVI Distribution Amplifier is connected with a DVI (male to male) cable from the DVI graphic source to the 1x4 DVI Distribution Amplifier input. There are four DVI outputs. DVI output one is the primary connection and is used for the main display. DVI outputs two through four follow the main display.

Note: The 1x4 DVI Distribution Amplifier will only output a DVI-D (DVI digital) signal.

Features:

- Connects computers with DVI video to up to four DVI monitors/projectors
- Maintains gorgeous video resolutions up to the highest DVI single link resolution of 1920 x 1200
- Supports DDWG standard for DVI monitors
