4K HDR HDBT™ HDMI® ARC HDCP 2.2 P+H

*WyreStorm - Powerful. Reliable. Simple.*

## Introduction

De-centralize sources connected to the H2X matrix platform with this HDBaseT™ input & output card. Accepting 4K UHD transmissions from 70m/230ft, this modular card allows source devices to be kept in-situ whilst making them part of the main distribution system.

## Key Features

- HDBT Input - Enables the direct connection of a remote source to the matrix via an HDBaseT™ Transmitter only at the source location, rather than an HDBaseT™ extender set previously required to distribute a remote signal over distance to a matrix. The matrix will then route the remote source signal as it does with any locally connected source.
- HDBaseT™ Output- Transmitting Class A HDBaseT™ which includes video, audio, control and power up to 70m/230ft of 4K and 100m/328ft of 1080p
- HDMI Output - Mirrored to HDBaseT to allow additional connection of a local display device, AVR or to extend with a hybrid active optical HDMI cable (HAOC)
- Stereo Audio Output - Offering stereo audio breakout of a zone with a 3-pin phoenix connector for analog audio
- S/PDIF output supporting 5.1 audio content de-embedded from sources or ARC from connected zones
- S/PDIF Audio Input - Another way to inject digital audio to take advantage of the H2X platform's powerful audio matrix and DSP.
