INTRODUCTION

This 4K UHD+ 6 by 2 Matrix provides the ability to connect up to (6) 4K UHD HDMI sources to up to (2) 4K UHD HDMI displays and freely switch between them. This unit comes with full support for 18Gbps (600Mhz) resolutions up to, and including 4K@60Hz (4:4:4, 8-bit) as well as support for 16-bit Deep Color (up to 1080p@60Hz), HDR (High Dynamic Range), HD audio and other features defined by the HDMI 2.0 specification. With a comprehensive EDID management feature that includes the ability to select between (6) built in default EDIDs, or an EDID copied from a connected sink device, this matrix can solve many interconnectivity problems. WEBGUI OVERVIEW

All functions, including status, power, input selection, preset activation & management, EDID management, HDCP management, Ethernet settings, and reset/firmware functions are controllable via multiple tabs in the WebGUI interface allowing for intuitive operation. To view the contents of a tab, click on the appropriate button at the bottom of the window. The individual tabs and functions will be introduced in the following sections.

- **Status:** The status tab provides access to information about the current routing selection and power state. It also provides information about each preset’s configuration as well as a button to instantly activate each preset.

To activate a stored preset, click on the appropriate button. The new routing will take effect immediately.

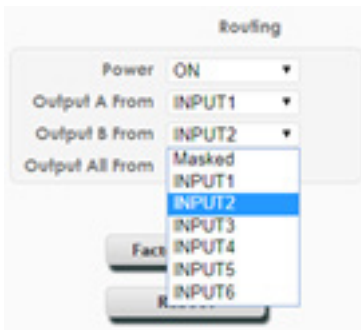

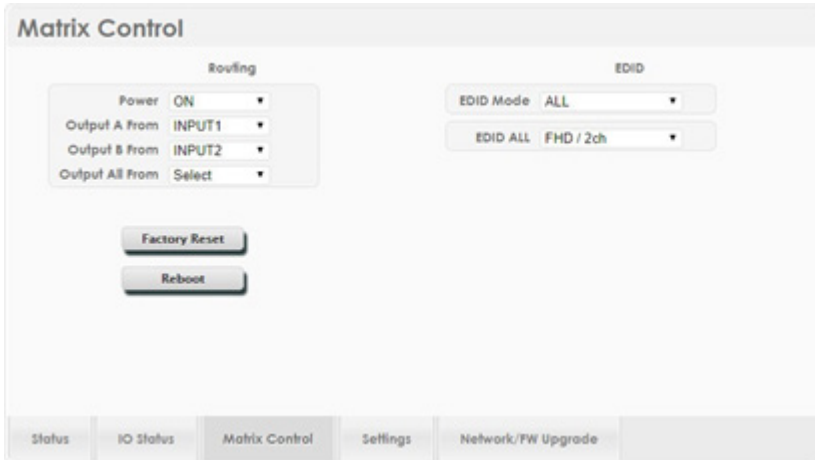

- **I/O Status:** This tab provides detailed information about all connected sink devices including type, manufacturer name, native resolution, color depth, 3D support, 4K support and audio format support as well as basic source detection information.

When a live input source is detected on one of the (6) HDMI inputs the corresponding input in this tab will display “ON”. If no source is detected on that input, it will display “OFF”.

The six HDMI input ports and two HDMI output ports may be freely renamed. Each name can be up to (8) characters long. Please click the associated “Save Name” button to store any changes made.

- **Matrix Control:** This tab provides direct control over the unit's power state, input/ output routing, and EDID management. A way to reboot the unit, or perform a factory reset is also provided.

Any of the available inputs may be selected as a source for either of the two outputs by selecting the preferred input from the dropdown next to the “Output A” and “Output B” text.

It is also possible to select a single source to be routed to both outputs quickly by selecting a source from the “Output All From” dropdown. Selecting “Masked” will output a blank video signal with no audio.

The EDID section of the Matrix Control tab controls the EDID management for the unit. All inputs can share the same assigned EDID, or each input can have a discrete EDID assigned to it.

NOTE: Changes to the EDID selection will result in a brief blanking of the video signal.

- Selecting the “ALL” mode will send the selected EDID to all inputs.
- Selecting the “APPOINT” mode allows each input to have a different EDID assigned to it.

The available EDID options are:

- **OUTPUT A:** EDID is passed from the currently connected display
- **OUTPUT B:** EDID is passed from the currently connected display
- **FHD/2Ch:** 1080p@60Hz, 8-bit & LPCM 2.0
- **FHD/MCh:** 1080p@60Hz, 8-bit & LPCM 7.1/Bitstream/HD Bitstream
- **4K UHD/2Ch:** 4K@30Hz, 8-bit & LPCM 2.0
- **4K UHD/MCh:** 4K@30Hz, 8-bit & LPCM 7.1/Bitstream/HD Bitstream
- **4K UHD+/2Ch:** 4K@60Hz (4:4:4), 8-bit & LPCM 2.0
- **4K UHD+/MCh:** 4K@60Hz (4:4:4), 8-bit & LPCM 7.1/Bitstream/HD Bitstream

The unit can also be powered on or off from this tab. Note that Ethernet, RS-232, and IR will remain active while the unit is in “OFF” (stand-by) mode. To perform a factory reset on the unit, please click the “Factory Reset” button. To reboot the unit, please click the “Reboot” button.

- **Settings:** This tab allows for control over each inputs HDCP mode as well as configuration of all (6) routing presets.

The HDCP mode for each input may be switched between the “**Standard**” and “**Apple**” modes. “**Apple**” mode allows for the display of non-HDCP required content from Apple, and similar, devices on non-HDCP displays.

NOTE: Changes to the HDCP mode may result in a brief blanking of the video signal.

All (6) routing presets may be set here as well. Select the preferred video source (or “**Masked**” for a blank video signal with no audio) for each output to be recalled when the specified preset is activated.

- **Network/FW Upgrade:** This tab provides control over the unit’s network settings as well as providing a simple way to update the unit’s firmware, if necessary.

The Address Type dropdown allows selection between Static IP (manual configuration) or DHCP (automatic IP configuration) modes. When in STATIC mode the IP address, netmask and gateway can be defined manually. The HTTP and Telnet ports can also be changed from their defaults here. After making any changes, please press “**Save**” to store the new settings in the unit. If the IP address has been changed, it will be necessary to re-connect to the WebGUI using the new IP address.

The Firmware Upgrade section of this tab provides a way to easily update the firmware of the unit.
