

Adder RD1716QIPUS Rack Tray 17in Samsung screen plus AVX5016IP KVM switch

The ADDERView RDX 5000IP is a high density rack tray with fully featured USB, PS/2, Sun and Video control for critical environments, providing local and remote management for your server room with an integrated AVX1016IP KVM Switch. This product features a 17 inch premium quality Samsung SXGA 1280 x1024 TFT LCD panel with touchpad control and advanced OSD for device selection. This unit controls 16 computers via 4 secure IP connections and can expand support up to 256 computers by adding CATx 5000 switches. The 1U keyboard tray is available in most language layouts as well. In addition, the switch may be connected, via CAT5e cable, to any type of server including PC, Mac and Sun using ADDER's CAM modules. With LDAP integration plus ADDER.Net management software this product allows you to automate the task of managing your network hardware and authenticating users against your existing LDAP infrastructure. The integrated RS232 gives the ability to control other external devices such as power management devices. The enterprise grade integrated KVM over IP switch employs AES128 bit encryption and RSA2048 authentication ensuring your control system remains secure at all times. The ADDERView RDX 5000IP provides country code reporting, DDC and continuous keyboard and mouse emulation to further ensure faultless operation across your unique installation. Available with the following connectivity options: Serial (AVX5000 only), USB, PS/2, VGA & 3.5mm Audio
