

Atlona AT-HDVS-TX-WP-NB Blank Face Plate for HDVS Series WP Extender (Transmitter)

Blank Face Plate for HDVS Series Wall Plate Switchers

The Atlona AT-HDVS-TX-WP-NB is an accessory face plate for HDVS and HDVS-150 series wall plate switchers. It is designed to eliminate the Display On/Off and Input Select buttons when control is through a third-party control system or the buttons are not functional. This eliminates operator confusion when “Display Control” buttons and related functions aren’t implemented in the AV system design. The AT-HDVS-TX-WP-NB includes no electronics and easily replaces the original factory face plate.

The AT-HDVS-TX-WP-NB is ideal for use with HDVS wall plate switchers in conjunction with AT-UHD-CLSO-612 switchers when these buttons are not functional. The face plate is also ideal for AV systems where a third-party control system is utilized and where additional points of control are not desired.

Features

US, Two-gang replacement faceplate

- Designed for HDVS and HDVS-150 Series wall plate switchers
- Provides alternative face plate for systems that don’t require control at the switcher

Eliminates control buttons

- Covers-up Display On/Off and Input Select buttons on the switcher
- Eliminates the potential for operator confusion
