

Securitytronix ST-VSP16 CCTV Video Surge Protector/16 BNC in/out model

This listing is for ST-VSP16 Protector only. Use description below as a general reference.

The Securitytronix ST-VSP series of video surge protectors have been designed to protect baseband video signals below 10 MHz from over-voltage, over-current and electrostatic discharge. Three units are available with either four, eight or sixteen inputs. Each model features multi-level protection, wide capacity, low limit voltage, fast response time and low insertion loss. The four and sixteen input units feature fixed female BNC inputs and outputs while the eight input unit features fixed female BNC inputs with flexible male BNC jumper cabled outputs. The male BNC connectors on the eight input unit are equipped with a strain relief mechanism to prevent connector damage in tight environments. All three units are housed in rugged, low-profile metal housings.

Features

- Available with 4, 8 or 16 video inputs
- 12VDC Clamping voltage
- 10kA Peak surge protection
- Insertion loss <0.5dB @ 3 - 10 MHz
- Rugged metal housing
- RoHS, CE, FCC Compliant
