Apantac EDID-L-D EDID Learner and Emulator (DVI)

The **EDID Learner and Emulator** from **Apantac** can be used together to glean and store EDID information across a DVI interface. The learner can be connected to any DVI display to capture the compatible resolution and audio format of the device. The information can then be stored in the emulator for later use avoiding the need to constantly reprogram devices.

Store information for optimizing output quality of the source device LED indicators alert when learning and writing processes are complete
