

Shinybow SB-3716 1x4 S-VIDEO and AUDIO DISTRIBUTION AMPLIFIER SPLITTER

1x4 S-Video/Analog Audio Distribution Amplifier. Model SB-3716

The 1x4 S-Video/Analog Audio Distribution Amplifier is designed to work as a splitter for S-Video/Analog Audio applications. Capable of splitting a S-Video and Analog Audio signal from one source to four devices with compatible inputs. A built in amplifier will boost the signal to the needed level, to prevent signal loss and picture degradation. A maximum bandwidth of 100MHz will support a sharp and highly defined video in multiple resolutions of up to 576i. The 1x4 Distribution Amplifier works with satellite and cable set-top boxes, DVD players, D-VHS players and all other equipment that is equipped with proper Audio/Video Connections.

Features:

- Sends Video and Audio to multiple displays at the same time
- Allows connection of 4 displays
- Supports LDTV and SDTV resolutions
- Installs in seconds
