

Atlona ATVL-SR-2 2M (6Ft) S-Video To Rca (Composite Video) Cable (Value Series)

2M (6 FEET) ATLONA S-VIDEO TO RCA (COMPOSITE VIDEO) CABLE. MODEL ATVL-SR-2

Description:

Trying to interconnect your video equipment and have problems with non-matching connectors? No worries - This Cable was designed specifically to adapt S-Video equipment to Composite Video equipment. It is featured with Gold Plated connectors, Oxygen Free Copper conductor and Dual shields. Gold connectors will keep a tight connection. Copper conductor will ensure the best signal transfer and high video performance, while a Double shielded construction will reduce interference to a minimum.

Applications:

Primarily used to interconnect any video or computer equipment that utilizes S-video and Composite video jacks.

Specs:

- 2m (6ft) S-Video male to RCA male
- 24k gold-plated connectors
- Dual coaxial High-Purity Oxygen Free Copper conductor design
- Double shielding for max rejection of EMI and RFI

Why our cables and not someone else's?

Since the company was created (more than 8 years ago), we have been committed to providing our customers with quality products. Our Video cables are built to the particular specifications, which in return make our cables meet or exceed Video standards. There are not too many companies that manufacture their cables to meet those standards. The only way that anybody can make these cables to their intended specifications is to manufacture those cables at a Certified Factory. By making cables at the certified facility adds benefits of using Industrial quality materials in the manufacturing process. (*Our Ultra Series also uses different outer jacket which makes it UL CL2 rated for in-wall installations.*) All these cables are also ROHS certified, which means, that they contain no Lead or other environmentally harmful materials.

Large companies that have established themselves on the market, have been manufacturing their cables under these standards for a while, but unfortunately their prices are extremely high. This usually happens for either one or both of main reasons: 1) marketing department thinks that their company is so well recognized, that consumers will buy their products regardless of the price. 2) products of these companies go through so many dealers or "middlemen", that in order to pay them they have no other choice, but to raise prices. Unlike them, we own our factories and we don't keep "middlemen", which allows us to keep a much lower pricing than most stores or other retailers. As you have probably noticed, there are many internet retailers that claim certain specs or claim that they are better than other companies and at the same time they have extremely low prices. It might seem as a good deal at first, but please keep in mind that it is impossible to use Industrial Quality material and at the same time offer such a low price. While those cables will work and at short lengths signal loss will be minimal, signal degradation and interference gained is still going to be high, since improper materials are used. We on the other hand, try to provide our customers with the best quality products, which unfortunately, because of expensive materials, makes it impossible to keep the prices at a very low point. Therefore, if you value your investment in to Video equipment, it is highly recommended to use good quality interconnects.
