

Atlona ATVL-OPT-2 2M (6FT) ATLONA OPTICAL DIGITAL AUDIO CABLE (VALUE SERIES)

2M (6 FEET) ATLONA OPTICAL DIGITAL AUDIO CABLE. MODEL ATVL-OPT-2

Description:

Optical cables are a must-have for any audio enthusiasts. Designed for maximum performance during the multichannel audio signal transfer, these cables will outperform any Digital coax cable and every OEM Fiber Optic audio cable. Constructed of an optical grade fiber, it offers an excellent signal transmission. Toslink cables are immune to Electromagnetic Interference and Radio Frequency Interference which are common to standard Audio/Video cables.

Note: Fiber Optic Audio cables in our ULTRA SERIES have the following advantages: 1) Polished Lenses; 2) Higher Purity Optical Fiber; 3) Nylon Sleeve; 4) UL CL2 rating for in-wall installations. (Ultra Series model AT22010)

Applications:

Primarily used to connect audio equipment like: Audio receivers, DVD players, SACD players SAT top boxes and cable boxes or any audio equipment that would utilize this type of connection.

Specs:

- 2m (6ft) Optical grade fiber
- Single Optical Strand Design
- Micro convex ends

Why our cables and not someone else's?

Since the company was created (more than 8 years ago), we have been committed to providing our customers with quality products. Our Fiber Optic Audio cables are built to the particular specifications, which in return make our cables meet or exceed Audio standards. There are not too many companies that manufacture their cables to meet those standards. The only way that anybody can make these cables to their intended specifications is to manufacture those cables at a Certified Factory. By making cables at the certified facility adds benefits of using Industrial quality materials in the manufacturing process. *(Our Ultra Series also uses different outer jacket which makes it UL CL2 rated for in-wall installations.)* All these cables are also ROHS certified, which means, that they contain no Lead or other environmentally harmful materials.

Large companies that have established themselves on the market, have been manufacturing their cables under these standards for a while, but unfortunately their prices are extremely high. This usually happens for either one or both of main reasons: 1) marketing department thinks that their company is so well recognized, that consumers will buy their products regardless of the price. 2) products of these companies go through so many dealers or "middlemen", that in order to pay them they have no other choice, but to raise prices. Unlike them, we own our factories and we don't keep "middlemen", which allows us to keep a much lower pricing than most stores or other retailers. As you have probably noticed, there are many internet retailers that claim certain specs or claim that they are better than other companies and at the same time they have extremely low prices. It might seem as a good deal at first, but please keep in mind that it is impossible to use Industrial Quality material and at the same time offer such a low price. While those cables will work and at short lengths signal loss will be minimal, signal degradation and interference gained is still going to be high, since improper materials are used. We on the other hand, try to provide our customers with the best quality products, which unfortunately, because of expensive materials, makes it impossible to keep the prices at a very low point. Therefore, if you value your investment in to Audio equipment, it is highly recommended to use good quality interconnects.
