

# TASCAM TRACKPACK iXR Complete Recording Solution for PC/Mac and IOS Devices

The new **TASCAM iXR Trackpack** delivers everything you need to record music on your PC, Mac or iOS device. Included in the complete recording bundle is **TASCAM's iXR** USB audio interface, protective sleeve and **TM-60** studio condenser microphone with desk stand.

The iXR Trackpack also includes a free license for Cubasis LE, a full-featured multitrack recording system for your iPad. Record vocals, play with software synthesizers, and mix with plug-in effects for a complete production all from your tablet. When you're ready to take your production to the next level, the iXR also includes Cubase LE for MacOS and Windows.

The TASCAM iXR is a 2-in/2-out USB interface, bus powered from your Mac or Windows computer and able to run from an optional AC adaptor when used with your iOS device. A pair of Ultra-HDDA mic preamps provide up to 57dB of gain and the best noise and distortion specs in their class. The audio design also features high-performance, musical components like NE5532 op amps which deliver rich deep sound quality without coloring the source. The iXR has also been designed with a "backpack-friendly" ultra-slim case which makes it easy to work with in the studio or on location. Rugged design, a sleek appearance and incredible audio fidelity combine to deliver the ideal recording interface for the musician on the go.

Also in the iXR Trackpack is the TM-60 battery-powered condenser microphone which is ideal for vocals, drums, and acoustic instruments. The TM-60 also includes a desktop stand and XLR microphone cable.

## Cardioid Condenser Microphone for a Pro Vocal Sound

A cardioid condenser mic is the perfect all-around mic for vocal and instrument recording, and the unidirectional pickup pattern makes it easy to adjust how much ambient sound is captured. And as the TM-60 is a battery-powered condenser, it does not require Phantom power and can be connected to virtually any mic preamp or audio interface.
