

SpinetiX HMP300 1080p HD Hyper Media Player

Secure, flexible and easy to deploy.

The New HMP300 is the number one choice player for digital signage deployments that require the highest security and reliability over the whole project duration.

Creatively engineered in Switzerland and assembled in Germany it delivers high quality content 24/7 in the harsher environments.

Simplified maintenance, low consumption, open to use and programmable it is the perfect choice for seamless deployments.

The power of flexibility.

The plug and play design of HMP300 keeps deployment simple. Our third-generation hyper media player supports all display sizes and orientations and renders full HD video and animations in real time with exceptional quality. With its low power consumption and no moving parts, HMP300 is engineered to last a lifetime and can comfortably outlive even the most demanding projects. Its adaptability allows you to connect displays and interactive devices via USB and serial port alike. HMP300 is easily programmable and helps you reliably source content from multiple cloud accounts. On top of it all, the firmware updates provided by our engineers over the lifetime of your player ensure top-notch security and reliability.

Elementi. The perfect match for HMP300.

Elementi is our simple, yet powerful digital signage software. It works with HMP300 letting you seamlessly upload and schedule content to your player. The bond between Elementi and your HMP300 ensures consistency in delivering visually rich experience to any combination of screens across your network day after day, year after year - regardless of external factors such as evolving PC standards and hardware. The easy built-in web interface of HMP300 helps you manage projects created in Elementi on the go.

Cockpit. Remote monitoring à la carte.

Cockpit is our web portal which includes a remote monitoring platform. It helps you keep an eye on your players no matter their location - next-door or on another continent. Cockpit is ideal for streamlining large deployments that consist of hundreds or even thousands of screens. It helps you preview live content rendered by your HMPs, monitor the status of the players, remotely install the latest firmware and much more. In addition to these free services, you can optionally activate Cockpit's Premium Monitoring - a set of advanced monitoring tools that allow you to facilitate your maintenance operations even further.
