

TASCAM AR-DR680 Carrying case for DR-680

The **AR-DR680** case by Porta-Brace is custom fitted for the TASCAM DR-680 recorder. It is constructed with waterproofed DuPont Cordura nylon laminated to a closed cell foam and soft inner lining to protect against the elements and hard knocks of field recording. The front pouch holds 2 small wireless receivers or transmitters or a small hand held microphone. The front panel zips open to about 30 degrees to access controls and prevents the pocket contents from spilling. A battery access panel makes emergency battery changes go smoothly. Left & right cable areas can be sealed against dust, rain, snow or can be rolled back and left open. A heavy-duty, padded suede shoulder strap is included.
