

SECO-LARM LD-1123-PAQ Single Channel Loop Detector

The LD-1123-PAQ Loop Detector is designed to be used with gates or other vehicle detection systems. The unit connected to an input loop which is buried in the pavement. If a vehicle is over the input loop, the detector sends a signal to perform such actions as opening a gate, holding a gate open, or indicating that a vehicle is in a bay.

Features

- Single loop input
- 3 Adjustable sensitivity settings
- 2 Form "C" relay outputs
- 11-Pin connector
- ABS plastic housing
- Power-on automatic reset
- Automatic drift compensation for varying environmental conditions
- Auto fault detection
- Terminal block (LD-ACC-TB) included
- Also Available: Wire Harness (LD-ACC-WH)
