

TV One A2-2000 10-Input Analog Audio Switcher for C2-4000/5000/7000 Series (except C2-7310)

A2-2000 Stereo Audio Switcher is a companion product for the C2 series Video Processors. It is slaved to and controlled directly from the Video Processor or it can be operated via one of the remote control units used to operate the C2 series product. Audio Follow Video (AFV) or Audio Breakaway functionality is fully supported. Additionally, the unit handles both high impedance unbalanced and low impedance balanced audio. It is styled to complement the appearance of the Video Processor and like the Video Processor, it can be operated in desktop or rack mount mode.

The A2-2000 connects to the C2 series Video Processor via a single interconnect cable and obtains its power from the Video Processor.

Key Features of the A2-2000:

- Ten Stereo Inputs
- Program and Preview Outputs
- Balanced and Unbalanced Inputs and Outputs
- Individual Input Trim and Balance Adjustments
- Audio Follow Video or Audio Breakaway
- Preview Headphone Output
