

Ricoh PJ WUL5670 WUXGA Resolution Standard Projector/5200 lumens

NOTE: Lenses are not included, projector body only.

Captivate with laser illumination

Impress your audience with high-end laser illumination in the RICOH PJ WUL5670 Fixed Lens Laser Projector. Transform your conference room, classroom, church or small auditorium with rich experiences that stick with your audience. Showcase your ideas as you intended them to be seen — in professional-quality presentations, HD video and 3D images with sharper lines, brighter colors and lifelike images.

Energize with HD and 3D images

Deliver engaging viewing experiences with the help of stunning WUXGA (1920 x 1200) resolution and Digital Light Processing (DLP) technology, which unlocks 1.07 billion colors and helps to captivate audiences with high luminosity and 3D images. With support for 2,304,000 pixels, you can project in full HD without downscaling for high-definition widescreen TV signals, DVDs and Blu-ray video. Project your widescreen PC screen or video at 5,200 lumens on screen sizes of 30" - 300".

Install anywhere, at any angle

Mount the PJ WUL5670 in hard-to-access places, without worrying about the regular maintenance of changing lamps and cleaning filters, since it's virtually maintenance-free for up to 20,000 hours of laser life. Free of lamps, the PJ WUL5670 can project without long warm-up times and generates less heat, so less cooling is needed. This minimizes fan noise and lets you tilt the projector 360 degrees without blocking airflow vents.

Simplify device management with remote control

Do you plan to mount your laser projector in a hard-to-access place? The PJ WUL5670 supports EZcast (sold separately) to give you the hands-free convenience of WiFi connectivity with your laptop computer or mobile device. Also, HDBaseT connectivity helps to eliminate cable clutter: simply use one cable for all HD video and audio without degrading quality. And with optional AV management software, you can remotely change settings and avoid the headaches of reaching your mounted projector.

See images clearly from any seat

Be sure that your audience can see your presentation or video as you intended whether they are sitting up close, far away or off to the side of your screen. The PJ WUL5670 gives you simple remote control over horizontal and vertical lens shift, zoom, focus and dynamic throw ratios. Now, your audience can experience your presentation or HD video similarly to viewing an HD television display — always seeing crisp, clear HD images no matter where they sit.

Deliver your message without interruption

Eliminate visual distractions that can cut into your audience's attention with the PJ WUL5670's automated image correction features. Keystone Correction and Four-Corner Adjustment let you show granular detail and action-packed motion as they were meant to be seen. Even when finishing your presentation, keep your audience's focus as the laser illumination cuts to black quickly — without the distracting noise of a traditional projector cooling down.

Features

- SVGA Resolution (800x600 dpi)
- Brightness rating of 3000 lumens
- Screen size up to 300"
- Contrast ratio of 2200:1
