

Zigen ZIG-POEPRO-70A 4K Extender (Transmitter/Receiver) Set/PoE/ARC/IR/RS232

The POEPRO-70A is the latest innovative new product from Zigen. 4K/60Hz 4:4:4 HDMI extender over single UTP/STP, with Bi-Directional IR and RS232. Robust and cost effective - the POEPRO-70A is the right HDMI extender for all of your projects requiring 24/7 flawless operation.

The ZIG-POEPRO-70A (Tx) provides a complete solution for detection and powering of POE IEEE 802.3af devices such as the ZIG-POEPRO-70A (Rx). The ZIG-POEPRO-70A (Tx) POE solution will safely detect, classify, and provide 48V up to 25W power to RX device connected to the HDBaseT port. The Tx unit will first read a signature from the Tx and only enable power delivery if all constraints are met. During the power delivery the link is continuously monitored for any fault or overloading conditions and the current is limited to avoid hazardous conditions.

The ZIG-POEPRO-70A (Tx) senses the removal of a powered device and turns off 48V power immediately when the Rx is disconnected.

Features:

- Supports 4K@60Hz 4:4:4
- Supports HDR-10
- Supports Dolby Vision 4K@ 30Hz
- Supports HDMI 2.0
- Supports HDCP 2.2
- Supports ARC
- Supports 3D pass-through
- Supports CEC pass-through
- Supports RS-232(Bi-direction transfer)
- Supports all frequency band IR control
- Supports all digital audio modes
- Supports 4K/60Hz 4:4:4 at 40-meter / 130-feet

TYPICAL APPLICATIONS

Any project requiring extension of 4K/60Hz 4:4:4 HDMI signal over long distances from equipment rack to display:

Cinema, Medical, Industrial, Classrooms, Conference Rooms, Video Distribution and more. Projects requiring extension of IR, RS232, and ARC from source to display.
