

## **Electro-Voice RE97LTxBLACK Condenser Omnidirectional Mini Theatrical Lavalier Microphone (TA4F/Black)**

The Electro-Voice® RE97LTx is an ultra-miniature, omnidirectional, condenser microphone designed for applications that demand a high quality microphone element that is practically invisible when worn by the speaker or performer. The RE97LTx is intended for spoken-word use in theatrical performance, fixed installations, corporate AV presentations, houses of worship, or any venue where a full-range, natural, and well-balanced sound is required from an inconspicuous, lightweight microphone.

The output of the RE97LTx is clean and accurate, while the omni-directional polar pattern ensures uniform output regardless of the microphone's angle relative to the sound source. The provided clip is a convenient anchor for the microphone on a lapel, tie, or shirt collar.

The supplied windscreens can be utilized in windy environments and to reduce breath noise. The RE97LTx has a shielded 4ft cable terminated in a genuine Switchcraft® TA4F connector and is ready for use with standard EV and Telex body-pack transmitters including the EV REV-BP, BPU-2/CSB-1000 and Telex WT-500/WT-1000. The wire to the body-pack is ultraflexible, and may be easily concealed.

### **Features:**

- Ultra-Miniature Size for Inconspicuous Use
- Omnidirectional Polar Pattern to Provide Clean Sound and Uniform Response
- Lightweight, Low Profile, Rugged Construction
- Superior Sound Quality
- Terminated with Female TA4F Connector for use with any EV Wireless Bodypack Transmitter
- Color: Black
