PreSonus FaderPort Classic Motorized Fader Control for Your Favorite DAW

Touch your music.

As great as DAWs are, it's a drag to control the transport and create fades and automation with a mouse. Most musicians prefer a real fader and transport controls that they can touch.

That's why we created the FaderPort™, which connects to your computer via USB and delivers complete transport controls for fast and efficient recording, along with a high-quality, touch-sensitive, motorized fader for writing fades and automation.

Great feel for perfect fades and smooth automation.

Feel is crucial when you're spending countless hours recording and mixing. So the ultra-affordable FaderPort features the same high quality, touch-sensitive, long-throw, motorized Alps fader that is found in expensive control surfaces and digital mixing consoles. With its 1,024-step resolution and dual-servo drive-belt motor, the response will be smooth and seamless.

Compatible with virtually all major DAW programs, the FaderPort enables you to record perfect fades and write single-channel or grouped-channel volume, mute, and pan automation in real-time.

Features:

- Write single-channel or grouped-channel volume, mute, and pan automation
- Touch-sensitive, 100 mm long-throw, motorized Alps fader
- 1,024 steps of resolution
