

Niles nTP7-B Auriel 7 inch Touch Panel/Black

Introducing the Niles Auriel nTP7, a 7" touch panel controller with a contemporary industrial design for control of the Niles Auriel™ MRC-6430 multi-room audio control system. This touch panel is wall mountable in either portrait or landscape orientation to best suit the needs of your room and includes a speaker, microphone and color camera to accommodate future enhancements.

The high resolution interface makes this unit one of the most popular control devices on the market—second in popularity only to the traditional remote for its sleek appearance and simple user interface.

Not all touch panels are created equally – and the Auriel 7" touch panel leads the pack. The touchscreen is highly responsive, and the proximity sensor wakes it from sleep without any touch required. The front panel glass design makes this controller highly durable, easy to clean and resistant to scratches.

Features:

- 7" diagonal viewable area LCD touchscreen interface
- Contemporary, sleek Industrial Design
- Edge to edge glass
