

Xantech 079144 One-Zone Amplified Connecting Block

The 791-44 is an amplified connecting block that permits any combination of up to ten single or dual IR emitters, driven directly, at high or low output levels. Expandable to 100 emitter ports. Requires either the 781ERGPS or 782ERGPS Power Supply.

Features

- Emitter ports with jumpers permit high or low power
- High-speed opto-isolator for improved operation
- Parallel emitter ports drive ten single or ten dual emitters
- Contains red LED input signal Test-IR
- Up to nine 079000's can be connected to the 079144 if more than ten emitter ports are needed
- STATUS terminal for connection of Xantech IR Receivers and Keypads that have status indicator LED's
- Quick connect stereo mini jack for Xantech IR Receivers that use a stereo mini plug
