

Datavideo TVS-1000 Trackless Virtual Studio System

The TVS-1000 from Datavideo is a 5-in-1 trackless virtual studio system, which consists of a virtual studio, video switcher, character generator, video recorder, and web streaming encoder. This system is suitable for production companies, corporate producers, users in education, small studios, and TV stations. The TVS-1000 system includes the RMC-220 Remote Control Panel unit.

As a virtual studio solution, the TVS-1000 supports pan, tilt, and zoom camera movements for a dynamic effect. The built-in Virtual Set Maker allows users to fully customize their sets: background images can be inserted with ease, logos can be added to any surface, and video can be run in the backdrop. In addition, professional studio templates can be downloaded. The Trackless Virtual Studio System provides a professional platform for users to create and present video productions quickly. For multi-layered results, two DSK are featured to allow for CG and animation in every scene. The TVS-1000 comes pre-installed with 20 virtual scenes, each of which is designed with four different view angles.

Features:

- Multi-language user interface
- Multiple preview monitoring
- Professional Chroma Key Wizard
- Trackless Virtual Technology
- User-friendly character generator
- Video recording
- Virtual set maker
