

Bosch DCNM-DSL DICENTIS Discussion Device with Language Selector (Sold Without Microphone)

DICENTIS incorporates several standardized technologies that have been combined to create an open platform. Complete system solutions can be created by simply integrating compatible products. This makes DICENTIS extremely scalable, enabling it to evolve with the growing needs of meeting and conference facilities. At its heart, the DICENTIS Conference System makes use of the unique IP based OMNEO media networking architecture, developed by Bosch.

The elegantly designed DICENTIS Discussion devices enable participants to speak, register a request to speak, and listen to discussion. With the DICENTIS Discussion device with language selector, delegates can conveniently listen to the speaker in their preferred language. Language selection is straightforward and is automatically activated when headphones are connected to the device. The delegate can then scroll through the available languages by pressing the illuminated touch buttons. Available languages are displayed in native characters to enhance readability.

Dual-use and fast participant recognition (via NFC tag identification) can be conveniently enabled by the use of additional software licenses.

Features:

- Configurable as a participant, dual-use, or chairperson’s device
- Native character language indication
- Built-in NFC for fast participant recognition
